EDUCATION

Vellore Institute of Technology

Computer Science and Engineering; GPA: 8.81

Bhopal, India

St. Joseph's College

Class XII Percentage (82%)

Prayagraj, India

St. Joseph's College

Class X Percentage (94%)

Prayagraj, India

SKILLS SUMMARY

- **Languages:** Python, C++, JAVA, HTML, CSS, JavaScript
- **AI/ML Libraries:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Joblib
- **Cloud & MLOps:** AWS (SageMaker, IoT Core, Kinesis, S3), FinOps, MQTT, mTLS
- **Databases:** MongoDB, MySQL
- **Tools:** Git, GitHub, Power BI
- **Platforms:** Visual Studio Code, BlueJ, Vercel, Netlify

RELEVANT EXPERIENCE

Open-Source Contributor - GirlScript Summer of Code (GSSOC)

May 2024 – Aug 2024

- Enhanced open-source projects by resolving complex issues and deploying new features, boosting code efficiency by 25%.
- Orchestrated a global team of 15 open-source contributors to optimize a cloud-based data processing pipeline, achieving a 40% reduction in average latency and enhanced processing speeds.

HEALTH HACK- John Hopkins & VIT

March 2025

- Engineered an AI-based predictive healthcare system within a cross-functional team, slashing patient diagnosis time by 30%.
- Conceptualized and pitched 3 groundbreaking solutions to industry leaders at a tech conference, earning positive feedback; solutions tackled critical challenges in AI ethics and data privacy.

Network Coding for Efficient Data Transmission in Covid-19 Genomic Research:

March 2025

- This paper got published at "2025 International Conference on Intelligent Control, Computing and Communications (IC3) at IEEE
- Implemented network coding techniques to enhance data transmission efficiency in protein folding simulations, a consistent 50% improvement in throughput under high packet loss conditions (10%–30%) compared to traditional methods.

PROJECTS

Real-Time-Predictive-Maintenance-Data-Pipeline| [LINK](#)

February 2026

- Engineered AWS IoT pipeline (IoT Core, S3) handling 100+ telemetry events/sec.
- Trained SageMaker model achieving high-accuracy detection for machine failure prediction.
- Achieved <1s latency for real-time anomaly detection using a custom Python subscriber.
- Optimized cloud spend by 90% via automated FinOps resource lifecycle management.

JeevanChakra - Personalized Healthcare Web App | [LINK](#)

April 2025

- Developed a full-stack healthcare solution integrating AI-driven medical analysis, increasing self-diagnosis accuracy by 45%.
- Implemented a multi-channel reminder system
- Added a voice-enabled AI chatbot, improving diagnostic speed by 30%.

EduStack - AI-driven Course Generator | [LINK](#)

March 2025

- AI-powered platform personalizes coding courses based on user preferences, enhancing learning efficiency.
- Generates tailored course materials with Gemini AI, integrating relevant YouTube videos and notes.
- Allows customization of difficulty level, chapter count, and study hours for flexible learning.

CERTIFICATES

AWS Certified Machine Learning Engineer Associate

March 2026

- AWS Certified: Validated expertise in building, deploying, and scaling machine learning solutions using Amazon SageMaker and cloud-native data pipelines.
- Operational Excellence: Demonstrated proficiency in optimizing ML model security, performance, and cost-efficiency within the AWS ecosystem

Applied Machine Learning in Python

December 2025

- Applied machine learning in Python, focusing on model building and performance evaluation.
